

## **PCF Clinical Network role description**

### **PCF Clinical Network membership**

The clinical network membership of the PCF is open to all with an interest in improving continence services for children, young people and their families. It comprises largely of NHS clinicians and staff who have engaged with the PCF either through our outreach, word of mouth, or research. The membership currently has over 200 people signed up.

### **Role of Clinical Network**

The role of clinical supporters is to support the PCF with knowledge and practice of ongoing professional paediatric continence provisions. This informs the PCF's policy work, as well as keeps them informed of what it is like at delivery level.

### **Communications**

In return, the clinical network will be kept informed of PCF activity through quarterly updates following member meetings, and on an ad hoc basis as appropriate. This would include, and be determined by, PCF and external developments.

Updates will include PCF activity, priorities and messaging, political activity including those which clinical supporters could engage with and calls for support where needed.

### **Role and Responsibilities**

- Peer review PCF materials;
- Feed into PCF policy priorities at annual reviews;
- Informing the PCF of policy concerns at delivery level;
- Informing the PCF of good practice and innovation at local level that should be recognised, celebrated and shared.
